January 12, 2009

To whom it may concern,

Kaiser -Sunset LAMC Hospital is very happy with the integrated cross corridor fire door assemblies as manufactured by Total Door that were installed at our facility in 2008. The low profile panic hardware, built in electronic unlatching, semi concealed hinges, and locking channels provide an aesthetically pleasing door that cannot be achieved with conventional doors or other integrated door assemblies. The doors meet all OSHPD and local/state fire code requirements including the 44" clearance requirements in 8ft corridors. The doors are reliable and operate smoothly and efficiently. The doors have been maintained free to this point. We very much like the fact that the entire door assembly has been tested 5 million cycles and there is a life time warranty on all the hardware. Based on our experience we highly recommend the use of Total Door on other Kaiser facilities.

Sincerely,

Ed Banda
